“Finalist of " Entrepreneur of the year" Kingston Business Awards 2011" ”

Emergency 24 Hour Commercial Gas Pipe Tightness Testing

Tightness testing is carried out to ensure that your gas pipework is safe for use. In a new gas

pipework installation the test is to verify that pipework is gas tight.

On existing gas pipework installations, the test is to confirm that the pipework is gas tight.

A smell of gas or presence of gas detected would fail the test and would be required to be traced and repaired which ABC can also attend to.

We recommend that all gas pipework be tested on an annual basis. This can be carried out at the same time as the annual gas appliance service visit.

We also undertake all other gas services including new installations of central heating systems, planned preventative maintenance and also repairs of boilers, both domestic and commercial.

Commercial Gas Pipe Purging Service Engineers - Why is a purge required?

Whenever gas pipework is repaired, extended or newly installed a purge must be conducted.

Which purging services do we provide?

We are experts in the commissioning and decommissioning of commercial gas pipework.

Advanced Profesional Plumbing & Heating have a large project portfolio for commercial gas pipework low pressure purging on both large and small systems. We provide purging services for both new build, recommissioning or decommissioning projects.

Gas purging services are offered throughout all London Areas and surrounding areas.

We can assist all Domestic & Commercial Customers

Various types of services are offered to all private and trade customers for example:

- Landlords and tenants Overseas customers – in all countries who need sufficient service on the same day
