

“Reliable Family Run (Husband & Wife Formed)”

"Twice recommended by"Time Out" London in 2006"

"Finalist of the Training and Development Barking & Dagenham Business Awards 2008"

"Finalist of the "Best New Business" and "Entrepreneur of the year" Kingston Business Awards 2010"

What is Gas interlock System (GIS)?

An interlock is a system that will not allow the gas to be turned on until the ventilation system is operating correctly.

Why is an interlock required?

An interlock is required to ensure the safety and comfort of the kitchen staff. If the ventilation system is not operating correctly, gases including carbon monoxide and nitrogen dioxide can build up to dangerous levels. These two gases give most concern to the Health and Safety Executive (HSE).

The risks of not complying with the regulations include the following:

1. Risks to the health of employees.
2. Insurance implications of a claim by an individual or because of a related accident.
3. A GAS SAFE REGISTERED installer may issue an At Risk or Immediately Dangerous certificate which could adversely affect trade.

4. In the event of an incident-HSE investigation, up to a £5000.00 fine and referral to Crown court.

What is a Gas Proving System?

A gas proving system prevents dangerous situations occurring by preventing the gas supply from being turned on until all appliances isolation valves are closed.

Do I need a Gas Proving System?

You must have a gas proving system if any of your appliances **DO NOT** have flame supervision fitted.

If an appliance isolation valve is left open and the gas is turned on, gas will continue to vent into the kitchen.

A gas proving system prevents this dangerous situation occurring by preventing the gas supply from being turned on until all appliance isolation valves are closed.

How does a Gas Proving System work:

- a) First the fans must be running. (See panel "Fans On / Off" Indicators)
- b) Operate the gas power key-switch.
- c) Depress the "Start Gas Proving" Button.
- d) IF the gas system is safe, the main gas valve will open and the panel will indicate "Gas On"

Else the "Gas Off" indicator will remain lit, as an appliance valve is still open or a gas leak exists.
